HALL BENCH WITH CHEST.

THE hall bench illustrated here is in the same style as the piano bench given in the last number of *THE CRAFTSMAN*, and would make a good companion piece. The main features of the construction are precisely similar, with the exception of the shallow box that takes the place of the curved brace under the seat in the piano bench. This box can be used to hold all sorts of things that ordinarily accumulate in the hall, and the hinged seat lifts like a lid over it. The bench can be made in any desired length to fit any wall space without interfering with its construction or proportions.

A LIBRARY TABLE.

THIS generously proportioned table, with its ample top and sturdy structure, is especially fitted for use in a library, where a table with plenty of room for the books, magazines, and newspapers that one may be using is well-nigh indispensable. It is massive in construction, but not clumsy, owing to the curved lines and open spaces which soften the severity of the solid ends and the keys and tenons which form an effective structural decoration. A brace beneath the top keeps the ends firm, and the lower shelf acts as another brace.

ROUND TABLE.

THE round table shown here has the same general features in its construction as the library table, only modified to such a degree that the effect is light rather than massive. The braces, top and bottom, are crossed, and the four legs are wide and flat, with openings following the lines of the outside, and the decorative structural features of key and tenon made prominent. This table would be very useful in the living-room or as a second table in a large library, or it might be the main reading-table in a study or den.
